Assignment Brief

It is required to make a Booking System for a Hotel that has several branches. The application should be composed of the following components.

- 1. Booking Database (SQL Lite).
- 2. An ERD for SQL Lite Database. (pdf or png).
- 3. Application interface with Flutter, It's better to use software architecture ex: MVVM, MVP, MVC, etc ...
- 4. A report-like page to display all the rooms in the hotel and their status, e.g., booked, available. This page should authenticate the user before displaying the report.

Required Considerations

- The system should deal with the hotel branches / locations. The booking needs to be in a specific branch / location of the hotel.
- The system should allow booking several rooms under one booking name.
- The system should give facility to booking rooms of different types, e.g., single, double, suite, and should allow booking multiple persons in a double room or a suite.
- The system should give a discounted price (95%) if the customer has booked previously in the hotel.

Assignment Delivery

- Your work for the assessment is required to be delivered within 4 days of when you
 have received it.
- You can send the output files by email to <u>dev@initiumsolutions.me</u> as "ZIP" or "RAR" file, or you can upload it to a cloud document share.

Good Luck!

يلزم عمل نظام حجز لفندق به عدة فروع. يجب أن يتكون التطبيق من المكونات. التالية

1. حجز قاعدة البيانات (SQL Lite).

2. ERD أو SQL Lite. (pdf أو png).

3. واجهة التطبيق مع Flutter ، من الأفضل استخدام بنية البرامج مثل ، Flutter واجهة التطبيق مع ...
 MVP ، MVC ...

، صفحة تشبه التقرير لعرض جميع الغرف في الفندق وحالتها ، على سبيل المثال . 4. محجوزة ، متاحة. يجب أن تقوم هذه الصفحة بمصادقة المستخدم قبل عرض التقرير

الاعتبارات المطلوبة

- يجب أن يتعامل النظام مع فروع / مواقع الفنادق. يجب أن يكون الحجز في فرع الفندق . موقع محدد من الفندق
- يجب أن يسمح النظام بحجز عدة غرف تحت اسم حجز واحد •
- يجب أن يعطي النظام سعرًا مخفضًا (95٪) إذا كان العميل قد حجز مسبقًا في الفندق

تسليم الاحالة
